

FOR IMMEDIATE RELEASE

REPRISE SOFTWARE, INC. LICENSES THE REPRISE LICENSE MANAGER TO DYNAMIC DESIGN SOLUTIONS N.V. (DDS)

San Jose, CA – June 12, 2007 – Reprise Software is pleased to announce that a leading company in the CAE Software Tools industry, Dynamic Design Solutions, N.V., has adopted Reprise Software's Reprise License Manager (RLM) for its FEMtools product line. Dynamic Design Solutions will use RLM to enable secure license models that will allow it to package and price its software to match its customers' preferences.

First available in May, 2006, the Reprise License Manager™ (RLM) offers innovative license models and policies to Independent Software Vendors (ISVs) while better addressing the needs of enterprise software end-users. Although RLM resembles popular licensing systems in architecture and administration, its advantages are apparent in its simplicity, performance and value; three under-served areas in the marketplace today.

Dynamic Design Solutions' managing director Eddy Dascotte said, "Although our licensing needs are relatively modest, we still need to support all the popular FEMtools licensing models that our customers have come to expect on a wide variety of computing architectures. With RLM, we are able to cost-effectively provide those models in a framework that our customers can easily support."

"We are pleased that Dynamic Design Solutions has selected the Reprise License Manager as its license management solution," said Matt Christiano, Reprise Software's founder and president. "A growing number of software publishers, such as Dynamic Design Solutions, appreciate the unique innovations that RLM offers while maintaining the basic architecture familiar to most end-users."

RLM supports a core set of license types with license policy removed from the software and placed into the license key - in order to make integration and support easier for Independent Software Vendors, and to make the meaning of the license more transparent to the end-user community. Perhaps most important to end users, Reprise Software is committed to fully documenting the usage data format and partnering with third party report writer vendors to support it in order to expand the available sources of end user reporting tools.

About Dynamic Design Solutions

Dynamic Design Solutions ("DDS") is an independent and privately owned developer of CAE software tools for validating simulation models, optimizing engineering designs and integrating and automating simulation processes. Telephone: +32 16 40 23 00. Website: <http://www.dds.be>

About Reprise Software, Inc.

Reprise Software, Inc., headquartered in San Jose, California, was founded by veterans with over 50 combined years of experience in the electronic licensing industry to bring a superior license management alternative to independent software vendors and enterprise end user organizations.
